CIA IMAGERY ANALYSIS DIVISION

SAYN SHANDA OIL FIELDS
SAYN SHANDA, MONGOLIA

Three oilfields and a field processing and oil storage area are located near the town of Sayn Shanda in Outer Mongolia (Figure 2). The Sayn Shanda Field Processing and Oil Storage Area is situated one half nautical mile southeast of Sayn Shanda at approximate geographic coordinates of 44 52N - 110 09E (Figures 3 and 4). Sayn Shanda Oil Field Number 1 is located two nautical miles southeast of the field processing area while Oil Field Number 2 is three nautical miles south-southwest of this area (Figure 3). Oil Field Number 3 is located approximately fifteen nautical miles south of Sayn Shanda at approximate geographic coordinates 44 37N - 110 07E (Figure 5).

The Field Processing and Oil Storage Area is road served and is approximately 45 nautical miles southwest of the railroad between Ulaan Baatar and Peiping. This area consists of approximately 30 vertical POL tanks, four open oil reservoirs, a separator, and associated buildings, including a small support area to the southwest.

Several gathering lines lead southeast to Oil Field Number 1 which consists of approximately 120 wells; most of these are interconnected by gathering lines. A number of small buildings are also found in this area.

Oil Field Number 2 consists of approximately fifteen wells and one drilling rig. Gathering lines are not visible between this field and the field processing area nor between individual wells.

Oil Field Number 3 consists of nine probable drilling rigs, indicated by arrows on Figure 5. The field is road served; no gathering lines are visible in this area.

No major changes were apparent in comparing photography of [] with that of []. However, an increased degree of staining is apparent in the south end of the field processing and oil storage area.

All measurements have been made by the CIA/IAD/IB project analyst. They should be considered as approximate and must not be taken as official NPIC mensuration data compiled by the Technical Intelligence Division, NPIC.
